

## FOR IMMEDIATE RELEASE

### **Oasis TMS Offers Hope to Las Vegas Area Depression Sufferers with Breakthrough Treatment**

*Healthcare provider opens new office, providing NeuroStar Advanced Therapy, a non-drug depression treatment, to meet demand for mental health services in Nevada*

**Henderson, Nev., April 3, 2019** – [Oasis Counseling](#), a network of caring, inspiring and effective mental health clinics in the Las Vegas area, announced today it has opened the doors to [Oasis TMS](#) in Henderson, which offers transcranial magnetic stimulation (TMS) for the treatment of Major Depressive Disorder (MDD). Oasis TMS is one of the only providers of TMS therapy in the region, where mental health services are in high demand. According to Mental Health America’s most recent [rankings](#), Nevada is ranked at the very bottom for mental health services and availability.

Oasis Counseling opened in 2012 and offers a variety of mental health services, including family and couples counseling, psychological assessments and testing and cognitive behavioral therapy. The most recent addition to its roster of mental health treatments is [NeuroStar® Advanced Therapy](#) TMS, which uses magnetic pulses to stimulate areas of the brain that are underactive in depression. NeuroStar Advanced Therapy offers doctors real-time feedback and delivers enhanced care with its precise and accurate targeting, providing reliable and consistent treatment.

“Depression is unfortunately very prevalent in the Las Vegas area. Proven treatment options like TMS are in high demand, but there are very few providers,” said Doctor Timothy Jeider, MD, Board Certified General Psychiatrist at Oasis TMS. “We decided to open Oasis TMS to provide another platform to help those suffering. We know antidepressant medications do not work for everyone and are excited to bring NeuroStar Advanced Therapy to our patients — it is gamechanger and has the power to truly transform lives.”

NeuroStar Advanced Therapy is widely covered by major insurance plans and is available by prescription. The treatment is typically administered daily in a doctor's office for four to six weeks, with treatment sessions performed in as little as just under 19 minutes.\* Unlike electroconvulsive therapy (ECT), NeuroStar Advanced Therapy is non-invasive and allows patients to resume daily activities immediately following treatment sessions. It is also free from systemic side effects often associated with antidepressant medications.<sup>1</sup>

In celebration of its new treatment offering, Oasis TMS will host an educational open house event on Thursday, May 9 from 5:00 p.m.– 8:00 p.m. at its new Henderson facility located at 375 N Stephanie St., Building 8, Henderson, NV 89014 (intersection of Warm Springs and Stephanie Street). Oasis TMS is open Monday through Friday from 9:00 a.m. – 6:00 p.m. To learn more and schedule an appointment, visit [www.oasisTMS.com](http://www.oasisTMS.com) or call 702-839-4242.

---

\* Treatment time may vary depending on doctor's recommendation.

**About Oasis Counseling**

Oasis TMS is part of Oasis Counseling LLC, which provides the highest quality and service of mental health care to clients/patients in an effort to facilitate positive change and growth. With locations in Summerlin, South West, Henderson Green Valley, and Henderson Galleria. Their hospitality services to the patient/community are the highest in the industry. Their business is helping and healing from the moment a client/patient walks in the door to completion of treatment. To learn more, visit [www.oasiscounselingtoday.com](http://www.oasiscounselingtoday.com).

**About NeuroStar® Advanced Therapy**

NeuroStar® Advanced Therapy is the established leader in transcranial magnetic stimulation (TMS), a non-invasive form of neuromodulation. NeuroStar Advanced Therapy is the #1 TMS choice of doctors, and is widely available across the United States.

NeuroStar is reimbursed by most commercial and government health plans, including Medicare and Tricare. In addition, there are programs in place, such as NeuroStar Reimbursement Support, to help patients and providers obtain coverage and reimbursement for NeuroStar Advanced Therapy.

NeuroStar is indicated for the treatment of MDD in adult patients who have failed to receive satisfactory improvement from prior antidepressant medication in the current episode. In an NIMH-funded, independent, randomized controlled trial, patients treated with TMS using a clinical-trial version of the NeuroStar TMS System were four times more likely to achieve remission compared to patients receiving sham treatment ( $P = 0.0173$ ; odds ratio = 4.05).<sup>2</sup> The most common side effect is pain or discomfort at or near the treatment site, which usually resolves within one week. It is contraindicated in people with non-removable conductive metal in or near the head.

NeuroStar® is a registered trademark of Neuronetics, Inc. For more information and full safety and prescribing information, visit [www.neurostar.com](http://www.neurostar.com).
